The Science of...

24 0 3

Chapter 1 by N8

Botany is the scientific study of plants. It involves study, experimentation, and planting.

Growing plants has always been an interest to me. I have a natural talent at it. From Petunias to Bamboo to Cacti. I love it all. My mother taught me the practice of gardening ever since I was young. That was, until she passed away. That woman had the greenest thumb I had ever seen. It mattered not what kind of plant she grew, it was always prosperous.

I always wished to be like her, and I still do, to this day.

I would study about plants in my free time. I would test my soil quality and search about the best fertilizers and nutrients.

That's why I decided to go to the University of Indiana to study botany.
It was there that I first felt a love stronger than the one I had for gardening.
